Professor Pappas  
Physicist/Mathematician  
Inventor & Worldwide Patent Holder  
**PAPIMI**

## FOR SCIENTIFIC RESEARCH

MARCH 2008

In a busy Holistic Medicine Centre in Cyprus a number of patients were chosen at random to be treated using the PAPIMI. There were 100 treatment hours in total, most patients receiving between 6-10 treatments – some were less. Most treatments lasted a total of 20-25 minutes and a maximum of 3 body parts or areas were treated in any one session. There were many different age groups ranging from 21 to 80 years old, and the disease processes and symptoms these patients presented with were also varied, ranging from painful cysts on the eye, periodontal disease with inflammation, tinnitus, sinusitis, pain in joints, spine, muscles, limbs, liver, gut and intestines, constipation, diarrhea, chronic fatigue, difficulty concentrating, vertigo/dizziness, xerophthalmia (Sjögren's Syndrome), memory problems, haemorrhoids, benign prostate hypertrophy (BPH) and chronic phlegm production in bronchi and lungs restricting breathing.

Symptom Scoring Sheets were used from the beginning and the patient would subjectively score their own symptoms on a scale of 0 (no symptoms) to 10 (maximum symptoms). The percentage improvement was calculated at the end of the treatment sessions for all the symptoms treated.

### Diathermy Machine – Early Century vs Modern PAPIMI

#### Summary of Cases Treated

**Case 1 (46-year old male)** – a difficult case of thalassemia with pulmonary hypertension requiring frequent transfusions. There was pain in the liver region and chronic diarrhea that was alleviated after only 4 treatments of the PAPIMI.

**Case 2 (26-year old female)** – Pain of 6-month duration in the external part of the ear which disappeared after only 3 PAPIMI treatments (100% cure).

**Case 3 (51-year old male)** – Presbyopia for 3 years wearing +1.75 glasses completely cured (100% cure) after only one treatment of the PAPIMI – has been without glasses now for 2 months and can read font style 8 clearly close-up. Also treated chronic haemorrhoids requiring surgery in only one treatment.

**Case 4 (57-year old female)** – had chronic phlegm production in the back of the throat for many years that completely disappeared in only two treatments (100% cure).

**Case 5 (44-year old male)** – this man was diagnosed with Multiple Sclerosis (MS) in 1991 and had many symptoms when recently seen such as loss of sensation on both hands (40%), pain in the back of the head (85%), sinusitis (40%), short-term memory loss (37%), loss of balance (100%) and his clarity of thinking was diffuse (50%). He also walked very slowly, could not carry any shopping baskets and had a general depression and apathy. The percentages above indicate the percentage improvement in these symptoms after 12 treatments on the PAPIMI within 15 days. His wife also reported that he walked much quicker – he was now 50 metres ahead of her, instead of being 200 m behind, and his apathy and depression had converted to enthusiasm and excitement for life. His energy levels were much improved.

**Case 6 (79-year old male)** – had sinusitis that improved by 25% and painful arthritic knees that prevented him from playing golf that improved by 50% after 6 PAPIMI treatments.

**Case 7 (78-year old woman)** – was suffering with intermittent claudication of the left leg with quadruple bypass surgery. There was considerable pain and restricted movement in the left leg – in the hip and knee joints that improved by 50% with low back pain improving by 20% after 6 PAPIMI treatments.

**Case 8 (41-year old female)** – suffering from foggy brain, STM loss, joint pain in left arm and right shoulder blade that improved by about 50% after only two treatments of the PAPIMI. Energy levels have also greatly increased.

**Case 9 (65-year old female)** – her left hand always felt hot (20%), she had acute pain in her left ear everytime she slept (87%), cervical neck and lumbar pain (87%) and pain upon urination (100%). The percentages indicate the percentage improvement after 7 treatment sessions on the PAPIMI.

**Case 10 (40-year old male)** – diagnosed with severe mitral valve prolapse with sacroiliac pain and degeneration of joint. Also cervical or neck pain. Has undergone 5 PAPIMI treatments to date and has noticed at least a 50% improvement in the hip and neck pain, and a much greater energy level with increased physical stamina – he has presently postponed his open heart surgery due to rapid improvement.

**Case 11 (29-year old female)** – diagnosed with Chronic Fatigue Syndrome (CFS) about 7 years ago – in only 5 treatments with the PAPIMI she has seen a 40% improvement in her fatigue, 30% improvement in her concentration, 20% concentration in her tolerance of noise, and a 30% improvement in her insomnia.

**Case 12 (29-year old female)** – this lady was diagnosed with Fibromyalgia and Chronic Fatigue Syndrome and depression. She went through 10 PAPIMI treatments in total and has had the following improvements in her symptoms: Tired eyes (33%), TMJ joint pain (50%), sinuses (100%), headaches (100%), muscle and joint aches and pains – all body (33%), phlegm in bronchi (100%), intestinal pains (100%), fatigue

and general weakness (37%), lower back pain (100%), PMS symptoms (100%), pain in both legs (44%), pain in both arms (55%), tinnitus and coordination (20%).

**Case 13 (45-year old female)** – this lady presented with pain in the gums and mouth after major dental surgery for periodontal disease, as well as a painful cyst on the sclera of the eye. In only 3 PAPIMI treatments the acute dental pain had completely subsided (100% improvement) and the pain in the eye cyst had disappeared completely with a shrinking of the cyst. Her dental surgeon commented on the rapid healing of the mouth after surgery and said that he had not seen such rapid healing in all of his career.

**Case 14 (56-year old female)** – this lady presented with a number of symptoms related to connective tissue and cartilage degeneration, as well as dizziness (100%), burning sensation of stomach (66%), thoracic back pain (57%), numbness in the right foot (70%), xerophthalmia (70%), difficult and painful movement in the right arm (80%), pain in knee related to severe degeneration of the lateral meniscus with displacement of the fragments (40%). These percentage improvements were achieved with only 10 PAPIMI treatments, but the most striking improvement was for the incurable xerophthalmia or Sjorgen's Syndrome which was considered incurable by top ophthalmic surgeons in Israel and Cyprus. Only two days ago she went to the ophthalmic surgeon for an objective assessment of the xerophthalmia and there was a dramatic improvement – this attracted the attention of the surgeon who has booked an appointment at the Centre for further questioning.

**Case 15 (34-year old)** – diagnosed with Multiple Sclerosis in 1998. Had a total of 6 PAPIMI treatments, with the following percentage improvements in neck pain (100%), pain in left shoulder (28%), pain in shoulder blade (57%), pain in maxillary sinuses (66%), pain above eyes (100%), burning and itching in the left hand (60%), weakness in the left arm (62%) and general energy levels increased by 60%.

**Case 16 (53-year old male)** - diagnosis uncertain but suspect for Jacob-Creutzfeld syndrome – has complete memory loss, not even being able to remember the names of his children and wife and does not even recognize and react to his best friend – sudden onset about 1.5 years ago. These are the percentage improvements that he has had in the last 7 PAPIMI treatments: aggressiveness (25%), speech quality (37%), with better word understanding (12%), recognizing wife and children (16%), gait during walking (40%), recognizing friends and others (14%). Treatments are ongoing.

**Conclusions:** The PAP-IMI is really surprising many doctors around the globe, as it helps so many different problems (usually caused by a low Trans Membrane Potential (TMP) of the cells), and it works so fast. Having worked in clinical practice for over 25 years, there are some cases reported above that could never have seen such rapid improvement using other modalities of Holistic Medicine, including allopathic medicine.

There are cases of people who have tried everything and seen many doctors with no relief, yet the PAPIMI took away the problem in less than a week. This is especially true if the diagnosis is not clear (idiopathic), or it is a condition that conventional medicine has no answers.

## **CYPRriot CHAMPION JUDO STAR HELPED BY PULSING ELECTROMAGNETIC THERAPY**

One of the most promising teenage judo stars of Cyprus has excelled beyond all expectations recently when he came home from the 8th International Portuguese Tournament in Portugal this March 22rd 2008 with the Gold medal.

### **Andreas with his National Judo Coach**

Andreas Krassas, 17-years old from Larnaca, weighing 60kg has been suffering from sinus congestion and phlegm production for quite some time now. This often caused a blocked nose with snorting of phlegm to clear his throat and nose during competitions. This would often cause such congestion that he felt that he was drowning in his own phlegm and detracted him from showing his best.

As we all know, judo is a sport that requires speed, strength but particularly stamina, something that is difficult when your airways are blocked and you feel that you are drowning in large amounts of phlegm.

Only a few weeks ago the judo star Andreas went to the Davinci Natural Health Centre ([www.docgeorge.com](http://www.docgeorge.com)) in Larnaca, Cyprus where he lives. After an initial consultation with Dr. George J Georgiou, Ph.D.,N.D.,DSc (AM), a Holistic Medicine practitioner of many years standing, it was decided due to time pressures as Andreas was preparing for competition that he would do a few treatments on the PAPIMI Pulsing Electromagnetic therapy device to see if this would alleviate some of the inflammation and phlegm production.

Andreas had five PAPIMI sessions in succession – he had scored his phlegm production on a Symptom Scoring Sheet as a ‘10’ on a scale of 0-10, and his blocked nose he scored ‘10’ again on the same scale – ‘10’ is classified as ‘very bad symptoms’ and ‘0’ as ‘symptom free.’ After the 5 treatments on the PAPIMI his score dropped to 2 for both symptoms which is an 80% improvement in only a few days.

### **Andreas on the PAPIMI undergoing treatment**

In addition, Andreas reported increased energy levels and prolonged stamina and a sense of well-being.

Very soon after these treatments Andreas, on March 22nd 2008 he flew to Portugal to fight in the International 'A' Class (under 20's), the first official 'A' tournament for juniours under 20's under the auspices of the European Judo Association – what followed was truly astounding! He beat 4 contenders in a row, including the Spanish champion Raul Clemente with a clear Ippon leaving the Spanish trainers and judges aghast!

**Andreas with his opponents**

Again on April 11th 2008 Andreas flew to Hungary for the Senior European Championship 2008 – he came back with a gold medal after beating Dimitri Dragin of France, a 4 times world medalist!

Natural Medicine and pulsing Electromagnetic fields can greatly boost energy and efficiency in athletes, removing hidden inflammatory processes that hinder their optimal performance when competing at high levels. In addition, identifying and eliminating food intolerances, realigning the spine and posture with osteopathic adjustments, as well as adjusting hyperpronation, taking the right nutrients for your sport, optimizing diet to suit training needs – all this and more that can be offered by a cutting-edge Holistic Medicine Centre can certainly help our athletes to excel and perform at their best. Well done Andreas and let us wish you the best in the Olympics of 2012!
